

**PRODUCT SHEET**

**A PRODUCT FOR NOW**

Stagecraft developed the SLX Modular Lighting Bar to meet the increasingly stringent compliance challenges for electrical and mechanical safety. The SLX does this, as well as providing features which make installation and operation more efficient.

Our proprietary extrusions come together to provide two continuous chambers for the entire length of the bar.

The extrusion profiles also provide continuous attachment points top and bottom for rigging and accessory attachment.

Optional cable entry methods cater for all types of installation needs.

Flown, fixed or chain motor rigging - in theatres, studios, entertainment and function centres — **SLX** has it covered.

**SLX Features include:**

- Precise pickup point placement on-site
- Accurate horizontal trimming
- A choice of cable entry configurations
- Great accessibility for maintenance.
